

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC401	INFORMATION THEORY & CODING	4-0-0-4	2016
Prerequisite: EC302 Digital Communication			
Course objectives: <ul style="list-style-type: none"> To introduce the concept of information To understand the limits of error free representation of information signals and the transmission of such signals over a noisy channel To design and analyze data compression techniques with varying efficiencies as per requirements To understand the concept of various theorems proposed by Shannon for efficient data compression and reliable transmission To give idea on different coding techniques for reliable data transmission To design an optimum decoder for various coding schemes used. 			
Syllabus: Concept of amount of information, Entropy, Source coding, Channel Capacity, Shannon's Limit, Rate Distortion Theory, Channel Coding, Linear Block Codes, Cyclic codes, Cryptography, Convolutional Codes, Viterbi Algorithm			
Expected outcome: The students will be able to <ol style="list-style-type: none"> Apply the knowledge of Shannon's source coding theorem and Channel coding theorem for designing an efficient and error free communication link. Analyze various coding schemes Design an optimum decoder for various coding schemes used. 			
Text Books: <ol style="list-style-type: none"> P S Sathya Narayana, Concepts of Information Theory & Coding, Dynaram Publications, 2005 Simon Haykin: Digital Communication Systems, Wiley India, 2013. 			
References: <ol style="list-style-type: none"> Bose, Information theory coding and cryptography, 3/e McGraw Hill Education India , 2016 D.E.R. Denning, Cryptography and Data Security, Addison Wesley, 1983. J S Chitode, Information Theory and Coding, Technical Publications, Pune, 2009 Kelbert & Suhov, Information theory and coding by examples, Cambridge University Press, 2013 Shu Lin & Daniel J. Costello. Jr., Error Control Coding : Fundamentals and Applications, 2/e, Prentice Hall Inc., Englewood Cliffs, NJ,2004 			
Course Plan			
Module	Course contents	Hours	End Sem. Exam Marks
I	Introduction to Information Theory. Concept of information, units, entropy, marginal, conditional and joint entropies, relation among entropies, mutual information, information rate. Source coding: Instantaneous codes, construction of instantaneous codes, Kraft's inequality, coding efficiency and redundancy	9	15%
II	Noiseless coding theorem , construction of basic source codes, Shannon – Fano Algorithm, Huffman coding, Channel capacity – redundancy and efficiency of a channel, binary	9	15%

	symmetric channel (BSC), Binary erasure channel (BEC) – capacity of band limited Gaussian channels		
FIRST INTERNAL EXAM			
III	Continuous Sources and Channels: Differential Entropy, Mutual information, Waveform channels, Gaussian channels, Shannon – Hartley theorem, bandwidth, SNR trade off, capacity of a channel of infinite bandwidth, Shannon’s limit	9	15%
IV	Introduction to rings, fields, and Galois fields. Codes for error detection and correction – parity check coding – linear block codes – error detecting and correcting capabilities – generator and parity check matrices – Standard array and syndrome decoding	9	15%
SECOND INTERNAL EXAM			
V	Perfect codes, Hamming codes, encoding and decoding Cyclic codes, polynomial and matrix descriptions, generation of cyclic codes, decoding of cyclic codes BCH codes, Construction and decoding, Reed Solomon codes	9	20%
VI	Convolutional Codes – encoding – time and frequency domain approaches, State Tree & Trellis diagrams – transfer function and minimum free distance – Maximum likelihood decoding of convolutional codes – The Viterbi Algorithm. Sequential decoding.	9	20%
END SEMESTER EXAM			

Question Paper

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Each part has three questions uniformly covering the two modules and each question can have maximum four subdivisions. In each part, any two questions are to be answered. Mark patterns are as per the syllabus with 50% for theory and 50% for logical/numerical problems, derivation and proof.

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC403	MICROWAVE & RADAR ENGINEERING	3-0-0-3	2016
Prerequisite: EC303 Applied Electromagnetic Theory, EC306 Antenna & Wave Propagation			
Course objectives:			
<ul style="list-style-type: none"> To introduce the various microwave sources, their principle of operation and measurement of various parameters To study the various microwave hybrid circuits and formulate their S matrices. To understand the basic concepts, types, working of radar and introduce to radar transmitters and receivers. 			
Syllabus:			
Microwaves: introduction, advantages, Cavity Resonators, Microwave vacuum type amplifiers and sources, Klystron Amplifiers, Reflex Klystron Oscillators, Magnetron oscillators, Travelling Wave Tube, Microwave measurements, Microwave hybrid circuits, Directional couplers, Solid state microwave devices, Gunn diodes, Radar, MTI Radar, Radar Transmitters, Radar receivers.			
Expected outcome:			
The students will be able to understand the basics of microwave engineering and radar systems.			
Text Books:			
<ol style="list-style-type: none"> Merrill I. Skolnik, Introduction to Radar Systems, 3/e, Tata McGraw Hill, 2008. Samuel Y. Liao, Microwave Devices and Circuits, 3/e, Pearson Education, 2003. 			
References:			
<ol style="list-style-type: none"> Das, Microwave Engineering, 3/e, McGraw Hill Education India Education , 2014 David M. Pozar, Microwave Engineering, 4/e, Wiley India, 2012. Kulkarni M, Microwave and Radar Engineering, 4/e, Umesh Publications, 2012. Rao, Microwave Engineering, 2/e, PHI, 2012. Robert E. Collin, Foundation of Microwave Engineering, 2/e, Wiley India, 2012. 			
Course Plan			
Module	Course contents	Hours	End Sem. Exam Marks
I	Microwaves: introduction, advantages, Cavity Resonators - Rectangular and Circular wave guide resonators- Derivation of resonance frequency of Rectangular cavity.	4	15%
	Microwave vacuum type amplifiers and sources: Klystron Amplifiers - Re-entrant cavities, Velocity modulation, Bunching (including analysis), Output power and beam	4	
II	Reflex Klystron Oscillators: Derivation of Power output, efficiency and admittance	2	15%
	Magnetron oscillators: Cylindrical magnetron, Cyclotron angular frequency, Power output and efficiency.	3	
FIRST INTERNAL EXAM			
III	Travelling Wave Tube: Slow wave structures, Helix TWT, Amplification process, Derivation of convection current, axial electric field, wave modes and gain.	4	15%
	Microwave measurements: Measurement of impedance, frequency and power	2	

IV	Microwave hybrid circuits: Scattering parameters, Waveguide tees- Magic tees, Hybrid rings, Corners, Bends, and Twists. Formulation of S-matrix.	5	15%
	Directional couplers: Two hole directional couplers, S-matrix of a directional coupler. Circulators and isolators.	4	
SECOND INTERNAL EXAM			
V	Solid state microwave devices: Microwave bipolar transistors, Physical structures, Power frequency limitations equivalent circuit. Principle of Tunnel diodes and tunnel	4	20%
	Gunn diodes: Different modes, Principle of operation Gunn Diode Oscillators.	2	
VI	Radar: The simple Radar equation. Pulse Radar, CW Radar, CW Radar with non zero IF, Equation for doppler frequency FM-CW Radar using sideband super heterodyne receiver.	5	20%
	MTI Radar -Delay line canceller, MTI Radar with power amplifier & power oscillator, Non coherent MTI Radar, Pulse		
	Radar Transmitters: Radar Modulator-Block diagram, Radar receivers - noise figure, low noise front ends, Mixers, Radar Displays	3	
END SEMESTER EXAM			

Question Paper Pattern

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Each part has three questions uniformly covering the two modules and each question can have maximum four subdivisions. In each part, any two questions are to be answered. Mark patterns are as per the syllabus with 60% for theory and 40% for logical/numerical problems, derivation and proof.

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC405	OPTICAL COMMUNICATION	3-0-0-3	2016
Prerequisite: EC203 Solid State Devices, EC205 Electronic Circuits			
Course objectives:			
<ul style="list-style-type: none"> To introduce the concepts of light transmission through optical fibers, optical sources and detectors. To compare the performance of various optical transmission schemes. To impart the working of optical components and the principle of operation of optical amplifiers. To give idea on WDM technique. 			
Syllabus: General light wave system, advantages, classification of light wave systems, fibre types, linear and non linear effects in fibres, Fibre materials, fabrication of fibres, Optical sources, LEDs and LDs Optical detectors, Optical receivers, Digital transmission systems, Optical Amplifiers, WDM concept, Introduction to free space optics, Optical Time Domain Reflectometer (OTDR).			
Expected outcome:			
The students will be able to:-			
<ol style="list-style-type: none"> Know the working of optical source and detectors. Compare the performance of various optical modulation schemes. Apply the knowledge of optical amplifiers in the design of optical link. Analyse the performance of optical amplifiers. Know the concept of WDM Describe the principle of FSO and LiFi. 			
Text Books:

Keiser, Optical Communication Essentials (SIE), 1/e McGraw Hill Education New Delhi, 2008. 			
Course Plan			
Module	Course contents	Hours	End Sem. Exam Marks
I	General light wave system, advantages, classification of light wave systems. Fibres: types and refractive index profiles, mode theory of fibres: modes in SI and GI fibres, linear and non linear effects in fibres, dispersion, Group Velocity Dispersion, modal, wave guide and Polarization, Modes, Dispersion, attenuation- absorption, bending and scattering losses.	8	15%
II	Fibre materials, fabrication of fibres, photonic crystal fibre, index guiding PCF, photonic bandgap fibre, fibre cables. Optical sources, LEDs and LDs, structures, characteristics,	7	15%

	modulators using LEDs and LDs. coupling with fibres, noise in Laser diodes, Amplified Spontaneous Emission noise, effects of Laser diode noise in fibre communications		
FIRST INTERNAL EXAM			
III	Optical detectors, types and characteristics, structure and working of PIN and AP, noise in detectors, comparison of performance. Optical receivers, Ideal photo receiver and quantum limit of detection.	6	15%
IV	Digital transmission systems, design of IMDD links- power and rise time budgets, coherent Systems, sensitivity of a coherent receiver, comparison with IMDD systems. Introduction to soliton transmission, soliton links using optical amplifiers, GH effect, soliton-soliton interaction, amplifier gain fluctuations, and design guide lines of soliton based links.	8	15%
SECOND INTERNAL EXAM			
V	Optical Amplifiers ,basic concept, applications, types, doped fibre amplifiers, EDFA, basic theory, structure and working, Semiconductor laser amplifier, Raman amplifiers, TDFA, amplifier configurations, performance comparison.	6	20%
VI	The WDM concept, WDM standards, WDM components, couplers, splitters, Add/ Drop multiplexers, gratings, tunable filters, system performance parameters. Introduction to optical networks. Introduction to free space optics, LiFi technology and VLC. Optical Time Domain Reflectometer (OTDR) – fault detection, length and refractive index measurements.	7	20%
END SEMESTER EXAM			

Question Paper Pattern

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Each part has three questions uniformly covering the two modules and each question can have maximum four subdivisions. In each part, any two questions are to be answered. Mark patterns are as per the syllabus with 50% for theory and 50% for logical/numerical problems, derivation and proof.

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC407	COMPUTER COMMUNICATION	3-0-0-3	2016

Prerequisite: NIL

Course objectives:

- To give the basic concepts of computer network and working of layers, protocols and interfaces in a computer network.
- To introduce the fundamental techniques used in implementing secure network communications and give them an understanding of common threats and its defences.

Syllabus: Introduction to computer communication, Transmission modes, Networks, Interconnection of Networks: Internetwork, Network models: OSI model, TCP/IP protocol suite. Physical Layer, Data Link Layer, Media access control, Ethernet(802.3), Logical link control, Logical addressing: IPV4, IPV6, Subnetting, CIDR, ICMP, IGMP, DHCP, Routing, Transport Layer, Congestion Control & Quality of Service, Application Layer, Introduction to system and network security, security attacks, Firewalls, Intrusion detection systems.

Expected outcome:

The students will have a thorough understanding of:

- Different types of network topologies and protocols.
- The layers of the OSI model and TCP/IP with their functions.
- The concept of subnetting and routing mechanisms.
- The basic protocols of computer networks, and how they can be used to assist in network design and implementation.
- Security aspects in designing a trusted computer communication system.

Text Books:

1. Behrouz A. Forouzan, Cryptography & Network Security , , IV Edition, Tata McGraw-Hill, 2008
2. J F Kurose and K W Ross, Computer Network A Top-down Approach Featuring the Internet, 3/e, Pearson Education, 2010

References:

1. Behrouz A Forouzan, Data Communications and Networking, 4/e, Tata McGraw-Hill, 2006.
2. Larry Peterson and Bruce S Davie: Computer Network- A System Approach, 4/e, Elsevier India, 2011.
3. S. Keshav, An Engineering Approach to Computer Networking, Pearson Education, 2005.
4. Achyut S.Godbole, Data Communication and Networking, 2e, McGraw Hill Education New Delhi, 2011

Course Plan

Module	Course content (42 hrs)	Hours	End Sem. Exam Marks
I	Introduction to computer communication: Transmission modes - serial and parallel transmission, asynchronous, synchronous, simplex, half duplex, full duplex communication. Switching: circuit switching and packet switching	2	15%

	Networks: Network criteria, physical structures, network models, categories of networks, Interconnection of Networks: Internetwork	2	
	Network models: Layered tasks, OSI model, Layers in OSI model, TCP/IP protocol suite.	2	
II	Physical Layer: Guided and unguided transmission media (Co-axial cable, UTP,STP, Fiber optic cable)	2	15%
	Data Link Layer: Framing, Flow control (stop and wait , sliding window flow control)	2	
	Error control, Error detection(check sum, CRC), Bit stuffing, HDLC	2	
	Media access control: Ethernet (802.3), CSMA/CD, Logical link control, Wireless LAN (802.11), CSMA/CA	2	
FIRST INTERNAL EXAM			
III	Network Layer Logical addressing : IPv4 & IPV6	2	15%
	Address Resolution protocols (ARP, RARP)	2	
	Subnetting, Classless Routing(CIDR), ICMP, IGMP, DHCP	3	
	Virtual LAN, Networking devices (Hubs, Bridges & Switches)	1	
IV	Routing: Routing and Forwarding, Static routing and Dynamic routing	1	15%
	Routing Algorithms: Distance vector routing algorithm, Link state routing (Dijkstra's algorithm)	2	
	Routing Protocols: Routing Information protocol (RIP), Open Shortest Path First (OSPF), Border Gateway Protocol (BGP), MPLS	3	
SECOND INTERNAL EXAM			
V	Transport Layer –UDP, TCP	1	20%
	Congestion Control & Quality of Service – Data traffic, Congestion, Congestion Control, QoS and Flow Characteristics	4	
	Application Layer – DNS, Remote Logging (Telnet), SMTP, FTP, WWW, HTTP, POP3, MIME, SNMP	3	
VI	Introduction to information system security, common attacks	1	20%
	Security at Application Layer (E-MAIL, PGP and S/MIME). Security at Transport Layer (SSL and TLS). Security at Network Layer (IPSec).	3	
	Defence and counter measures: Firewalls and their types. DMZ, Limitations of firewalls, Intrusion Detection Systems -Host based, Network based, and Hybrid IDSs	2	
END SEMESTER EXAM			

Question Paper Pattern

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Each part has three questions uniformly covering the two modules and each question can have maximum four subdivisions. In each part, any two questions are to be answered. Mark patterns are as per the syllabus with 90% for theory and 10% for logical/numerical problems, derivation and proof.

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC409	CONTROL SYSTEMS	3-0-0-3	2016

Prerequisite: EC202 Signals & Systems

Course objectives:

- To introduce the elements of control system and its modelling
- To introduce methods for analyzing the time response, the frequency response and the stability of systems.
- To design control systems with compensating techniques.
- To introduce the state variable analysis method.
- To introduce basic concepts of digital control systems.

Syllabus:

Control system, types and application, feedback system, mathematically modelling of control systems, block diagram representation, signal flow graph, Mason's formula, test signals, time response analysis, frequency analysis, stability concepts and analysis, state variable analysis, Observability and controllability, digital control systems, state space analysis, Jury's test

Expected outcome:

The Students will be able to

- i. Represent mathematically a systems and deriving their transfer function model.
- ii. Analyse the time response and frequency response of the systems for any input
- iii. Find the stability of system
- iv. Design a control system with suitable compensation techniques
- v. Analyse a digital control system.

Text Books

1. Farid Golnaraghi, Benjamin C. Kuo, Automatic Control Systems, 9/e, Wiley India.
2. Gopal, Control Systems, 4/e, McGraw Hill Education India Education, 2012.
3. Ogata K., Discrete-time Control Systems, 2/e, Pearson Education.

References

1. Gopal, Digital Control and State Variable Method, 4/e, McGraw Hill Education India 2012.
2. Norman S. Nise, Control System Engineering, 5/e, Wiley India
3. Ogata K., Modern Control Engineering, Prentice Hall of India, 4/e, Pearson Education, 2002.
4. Richard C Dorf and Robert H. Bishop, Modern Control Systems, 9/e, Pearson Education, 2001.

Course Plan

Module	Course contents	Hours	End Sem Exam Marks
I	Basic Components of a Control System, Applications, Open-Loop Control Systems and Closed-Loop Control Systems, Examples of control system	1	15%
	Effects of Feedback on Overall Gain, Stability, External, disturbance or Noise	1	

	Types of Feedback Control Systems, Linear versus Nonlinear Control Systems, Time-Invariant versus Time-Varying Systems.	1	
	Overview of solving differential equations using Laplace transforms	1	
	Mathematical modelling of control systems - Electrical Systems and Mechanical systems.	2	
	Block diagram representation and reduction methods	2	
	Signal flow graph and Mason's rule formula.	2	
II	Standard test signals. Time response specifications.	1	15%
	Time response of first and second order systems to unit step input, ramp inputs, time domain specifications	2	
	Steady state error and static error coefficients.	1	
	Dynamic error coefficient.	1	
FIRST INTERNAL EXAM			
III	Stability of linear control systems: methods of determining stability, Routh's Hurwitz Criterion.	2	15%
	Root Locus Technique: Introduction, properties and its construction.	2	
	Frequency domain analysis: Frequency domain specifications, correlation between time and frequency responses.	1	
IV	Nyquist stability criterion: fundamentals and analysis	2	15%
	Relative stability: gain margin and phase margin. Stability analysis with Bode plot.	2	
	Design of Control Systems: PI, PD and PID controllers	2	
	Design with phase-lead and phase-lag controllers (frequency domain approach), Lag-lead	2	
SECOND INTERNAL EXAM			
V	State variable analysis: state equation, state space representation of Continuous Time systems	2	20%
	Transfer function from State Variable Representation, Solutions of the state equations, state transition matrix	2	
	Concepts of Controllability and Observability, Kalman's Test, Gilbert's test	2	
VI	Discrete Control systems fundamentals: Overview of Z transforms. State space representation for Discrete time systems.	2	20%
	Sampled Data control systems, Sampling Theorem, Sample & Hold, Open loop & Closed loop sampled data systems.	2	
	State space analysis : Solving discrete time state space equations, pulse transfer function, Discretization of continuous time state space equations	3	
	Stability analysis of discrete time systems Jury's test	1	
END SEMESTER EXAM			

Question Paper Pattern

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Each part has three questions uniformly covering the two modules and each question can have maximum four subdivisions. In each part, any two questions are to be answered. Mark patterns are as per the syllabus with 30% for theory and 70% for logical/numerical problems, derivation and proof.

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC461	MICROWAVE DEVICES AND CIRCUITS	3-0-0-3	2016
Prerequisite: EC403 Microwave & Radar Engineering			
Course objectives:			
<ul style="list-style-type: none"> To study microwave semiconductor devices & applications. To study microwave sources and amplifiers. To analyse microwave networks. To introduce microwave integrated circuits. 			
Syllabus:			
Limitation of conventional solid state devices at Microwave, Gunn – effect diodes, Microwave generation and amplification, IMPATT and TRAPATT diodes, Bipolar transistors, MESFET, Microwave amplifiers and oscillators, Microwave Network Analysis, Signal flow graphs, Microwave filters, Filter design by image parameter method, Filter transformation and implementation, Introduction to MICs, Distributed and lumped elements of integrated circuits, Diode control devices			
Expected outcome:			
The Students will be able to understand with active & passive microwave devices & components used in microwave communication systems and analyse microwave networks.			
Text Books:			
<ol style="list-style-type: none"> David M. Pozar, Microwave Engineering, 4/e, Wiley India, 2012 Robert E. Collin, Foundation of Microwave Engineering, 2/e, Wiley India, 2012. Samuel Y. Liao, Microwave Devices and Circuits, 3/e, Pearson Education, 2003.

Course Plan			
Module	Course contents	Hours	End Sem. Exam Marks
I	Introduction, Characteristic, features of microwaves, Limitation of conventional solid state devices at Microwave.	1	15%
	Gunn – effect diodes – Gunn effect, Ridley – Watkins-Hilsum theory, Modes of operation, Limited space – Charge accumulation (LSA) mode of Gunn diode.	2	
	Microwave generation and amplification. Structure, Operation, Power output and efficiency of IMPATT and TRAPATT diodes	2	
II	Bipolar transistors – biasing, FET – biasing, MESFET – Structure, Operation.	4	15%
	Microwave amplifiers and oscillators – Amplifiers – Gain and stability, Single stage transistor amplifier design.	4	
	Oscillator design – One port negative resistance oscillators.	2	
FIRST INTERNAL EXAM			

III	Microwave Network Analysis – Equivalent voltages and currents, Impedance and Admittance matrices, Scattering matrix, The transmission matrix.	3	15%
	Signal flow graphs. Impedance matching and tuning – Matching with lumped elements, Single stub tuning, Double stub tuning. Quarter wave transformer, Theory of small reflections.	4	
IV	Microwave filters – Periodic structures – Analysis of infinite periodic structures and terminated periodic structures, Filter design by image parameter method – Constant k, m-derived and composite. Filter design by insertion loss method. Filter transformation and implementation.	7	15%
SECOND INTERNAL EXAM			
V	Introduction to MICSS:-Technology of hybrid MICs, monolithic MICs. Comparison of both MICs.	4	20%
	Planar transmission lines such as stripline, microstrip line, and slotline.	3	
VI	Distributed and lumped elements of integrated circuits - capacitors, inductors, resistors, terminations, attenuators, resonators and discontinuities.	5	20%
	Diode control devices – switches, attenuators, limiters. Diode phase shifter. Circulators and isolators.	2	
END SEMESTER EXAM			

Question Paper Pattern

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Mark patterns are as per the syllabus with 70% for theory and 30% for logical/numerical problems, derivation and proof.

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC463	SPEECH AND AUDIO SIGNAL PROCESSING	3-0-0-3	2016
Prerequisite: EC301 Digital Signal Processing			
Course objectives: <ul style="list-style-type: none"> To familiarize the basic mechanism of speech production and the basic concepts of methods for speech analysis and parametric representation of speech. To give an overall picture about various applications of speech processing To impart ideas of Perception of Sound, Psycho-acoustic analysis, Spatial Audio Perception and rendering. To introduce Audio Compression Schemes. 			
Syllabus: Speech production, Time domain analysis, Frequency domain analysis, Cepstral analysis, LPC analysis, Speech coding, Speech recognition, Speech enhancement, Text to speech conversion. Signal Processing Models of Audio Perception, Psycho-acoustic analysis, Spatial Audio Perception and rendering, Audio compression methods, Parametric Coding of Multi-channel audio, Transform coding of digital audio, audio quality analysis.			
Expected outcome: The students will be able to <ol style="list-style-type: none"> Understand basic concepts of speech production, speech analysis, speech coding and parametric representation of speech and apply it in practical applications Develop systems for various applications of speech processing Learn Signal processing models of sound perception and application of perception models in audio signal processing. Implement audio compression algorithms and standards.

Jones, Electromechanics and MEMS, Cambridge University Press, 2001 			
Course Plan			
Module	Course content (42hrs)	Hours	End Sem. Exam Marks
I	MEMS and Microsystems: Applications – Multidisciplinary nature of MEMS – principles and examples of Micro sensors and micro actuators – micro accelerometer –comb drives - Micro grippers – micro motors, micro valves, micro pumps, Shape Memory Alloys.	4	15%
	Review of Mechanical concepts: Stress, Strain, Modulus of Elasticity, yield strength, ultimate strength – General stress strain relations – compliance matrix. Overview of commonly used mechanical structures in MEMS - Beams, Cantilevers, Plates, Diaphragms – Typical applications	3	

II	Flexural beams: Types of Beams, longitudinal strain under pure bending – Deflection of beams – Spring constant of cantilever – Intrinsic stresses	3	15%
	Actuation and Sensing techniques : Thermal sensors and actuators, Electrostatic sensors and actuators , Piezoelectric sensors and actuators, magnetic actuators	4	
FIRST INTERNAL EXAM			
III	Scaling laws in miniaturization - scaling in geometry, scaling in rigid body dynamics, Trimmer force scaling vector, scaling in electrostatic and electromagnetic forces, scaling in electricity and fluidic dynamics, scaling in heat conducting and heat convection.	5	15%
IV	Materials for MEMS – Silicon – Silicon compounds – Silicon Nitride, Silicon Dioxide, Silicon carbide, Poly Silicon, GaAs , Silicon Piezo resistors,	4	
	Polymers in MEMS – SU-8, PMMA, PDMS, Langmuir – Blodgett Films, Micro System fabrication – Photolithography – Ion implantation- Diffusion – Oxidation – Chemical vapour deposition – Etching	5	15%
SECOND INTERNAL EXAM			
V	Overview of Micro manufacturing – Bulk micro manufacturing, Surface micro machining , LIGA process –Microstereo lithography	6	20%
	Micro system Packaging: general considerations in packaging design – Levels of Micro system packaging	3	
VI	Bonding techniques for MEMS : Surface bonding , Anodic bonding , Silicon - on - Insulator , wire bonding , Sealing – Assembly of micro systems	3	20%
	Overview of MEMS areas : RF MEMS, BioMEMS, MOEMS, NEMS	2	
END SEMESTER EXAM			

Question Paper Pattern

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Each part has three questions uniformly covering the two modules and each question can have maximum four subdivisions. In each part, any two questions are to be answered. Mark patterns are as per the syllabus with 70% for theory and 30% for logical/numerical problems, derivation and proof.

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC467	PATTERN RECOGNITION	3-0-0-3	2016
Prerequisite: NIL			
Course objectives:			
<ul style="list-style-type: none"> • To introduce the fundamental algorithms for pattern recognition • To instigate the various classification and clustering techniques 			
Syllabus: Review of Probability Theory and Probability distributions, Introduction to Pattern Recognition and its applications, Bayesian decision theory, Bayesian estimation: Gaussian distribution, ML estimation, EM algorithm, Supervised and unsupervised learning, Feature selection, Linear Discriminant Functions, Non-parametric methods, Hidden Markov models for sequential data classification, Linear models for regression and classification, Clustering			
Expected outcome:			
The students will be able to			
<ol style="list-style-type: none"> i. Design and construct a pattern recognition system ii. Know the major approaches in statistical and syntactic pattern recognition. iii. Become aware of the theoretical issues involved in pattern recognition system design such as the curse of dimensionality. iv. Implement pattern recognition techniques 			
Text Books			
<ol style="list-style-type: none"> 1. C M Bishop, Pattern Recognition and Machine Learning, Springer 2. R O Duda, P.E. Hart and D.G. Stork, Pattern Classification and scene analysis, John Wiley 			
References			
<ol style="list-style-type: none"> 1. Morton Nadier and Eric Smith P., Pattern Recognition Engineering, John Wiley & Sons, New York, 1993. 2. Robert J. Schalkoff, Pattern Recognition : Statistical, Structural and Neural Approaches, John Wiley & Sons Inc., New York, 2007. 3. S.Theodoridis and K. Koutroumbas, Pattern Recognition, 4/e, Academic Press, 2009. 4. Tom Mitchell, Machine Learning, McGraw-Hill 5. Tou and Gonzales, Pattern Recognition Principles, Wesley Publication Company, London, 1974. 			
Course Plan			
Module	Course content	Hours	End Sem Exam Marks
I	Introduction: Basics of pattern recognition system, various applications, Machine Perception, classification of pattern recognition systems	3	15%
	Design of Pattern recognition system, Pattern recognition Life Cycle	2	

	Statistical Pattern Recognition: Review of probability theory, Gaussian distribution, Bayes decision theory and Classifiers, Optimal solutions for minimum error and minimum risk criteria, Normal density and discriminant functions, Decision surfaces	4	
II	Parameter estimation methods: Maximum-Likelihood estimation, Expectation-maximization method, Bayesian parameter estimation	2	15%
	Concept of feature extraction and dimensionality, Curse of dimensionality, Dimension reduction methods - Fisher discriminant analysis, Principal component analysis Hidden Markov Models (HMM) basic concepts, Gaussian mixture models.	6	
FIRST INTERNAL EXAM			
III	Non-Parameter methods: Non-parametric techniques for density estimation - Parzen-window method, K-Nearest Neighbour method.	3	15%
	Non-metric methods for pattern classification: Non-numeric data or nominal data Decision trees: Concept of construction, splitting of nodes, choosing of attributes, overfitting, pruning	3	
IV	Linear Discriminant based algorithm: Perceptron, Support Vector Machines	5	15%
SECOND INTERNAL EXAM			
V	Multilayer perceptrons, Back Propagation algorithm, Artificial Neural networks	4	20%
	Classifier Ensembles: Bagging, Boosting / AdaBoost	3	
VI	Unsupervised learning: Clustering - Criterion functions for clustering, Algorithms for clustering: K-means and Hierarchical methods, Cluster validation	5	20%

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC469	OPTO ELECTRONIC DEVICES	3-0-0-3	2016
Prerequisite: NIL			
Course objectives:			
<ul style="list-style-type: none"> • To know the physics of absorption, recombination and photoemission from semiconductors. • To analyse different types of photo detectors based on their performance parameters. • To discuss different LED structures with material properties and reliability aspects. • To explain optical modulators and optical components • To illustrate different types of lasers with distinct properties. 			
Syllabus:			
Optical processes in semiconductors – LASERS- Nitride light emitters- White-light LEDs- Optical modulators - optical switching and logic devices, optical memory- Optical detection - Optoelectronic ICs - Introduction to optical components			
Expected outcome:			
The students will be able to:			
<ol style="list-style-type: none"> i. Explain the property of absorption, recombination and photoemission in semiconductors. ii. Illustrate different types of lasers with distinct properties. iii. Explain different LED structures with material properties. iv. Analyse different types of photo detectors. v. Explain optical modulators and optical components. 			
Text Books:			
<ol style="list-style-type: none"> 1. Pallab Bhattacharya: Semiconductor Optoelectronic Devices, Pearson, 2009 2. Yariv, Photonics Optical Electronics in modern communication, 6/e ,Oxford Univ Press,2006. 			
References:			
<ol style="list-style-type: none"> 1. Alastair Buckley, Organic Light-Emitting Diodes, Woodhead, 2013. 2. B E Saleh and M C Teich, Fundamentals of Photonics:, Wiley-Interscience, 1991 3. Piprek, Semiconductor Optoelectronic Devices, Elsevier, 2008. 6. Xun Li, Optoelectronic Devices Design Modelling and Simulation, Cambridge University Press, 2009 			
Course Plan			
Module	Course content (42hrs)	Hours	End Sem. Exam Marks
I	Optical processes in semiconductors – electron hole recombination, absorption, Franz-Keldysh effect, Stark effect, quantum confined Stark effect, deep level transitions, Auger recombination heat generation and dissipation, heat sources.	7	15%
II	Lasers – threshold condition for lasing, line broadening mechanisms, axial and transverse laser modes, heterojunction lasers, distributed feedback lasers, DBR lasers, quantum well lasers, tunneling based lasers, modulation of lasers.	7	15%

FIRST INTERNAL EXAM			
III	Nitride light emitters, nitride material properties, InGaN/GaN LED, structure and working, performance parameters, InGaN/GaN Laser Diode, structure and working, performance parameters. White-light LEDs, generation of white light with LEDs, generation of white light by dichromatic sources, generation of white light by trichromatic sources, temperature dependence of trichromatic, generation of white light by tetrachromatic and pentachromatic sources, white-light sources based on wavelength converters.	9	15%
IV	Optical modulators using pn junction, electro-optical modulators, acousto-optical modulators, Raman-Nath modulators, Franz-Keldysh and Stark effect modulators, quantum well electro-absorption modulators, optical switching and logic devices, optical memory.	5	15%
SECOND INTERNAL EXAM			
V	Optical detection – PIN, APD, modulated barrier photodiode, Schottky barrier photodiode, wavelength selective detection, micro cavity photodiodes. Optoelectronic ICs, advantages, integrated transmitters and receivers, guided wave devices. Working of LDR, liquid crystal display, structure, TFT display, structure, polymer LED, organic LED.	7	20%
VI	Introduction to optical components, directional couplers, multiplexers, attenuators, isolators, circulators, tunable filters, fixed filters, add drop multiplexers, optical cross connects, wavelength convertors, optical bistable devices.	7	20%
END SEMESTER EXAM			

Question Paper Pattern

The question paper shall consist of three parts. Part A covers modules I and II, Part B covers modules III and IV, and Part C covers modules V and VI. Each part has three questions uniformly covering the two modules and each question can have maximum four subdivisions. In each part, any two questions are to be answered. Mark patterns are as per the syllabus with 50% for theory and 50% for logical/numerical problems, derivation and proof.

Course code	Course Name	L-T-P - Credits	Year of Introduction
**451	Seminar and Project Preliminary	0-1-4-2	2016
Prerequisite : Nil			
Course Objectives <ul style="list-style-type: none"> To develop skills in doing literature survey, technical presentation and report preparation. To enable project identification and execution of preliminary works on final semester project 			
Course Plan Seminar: Each student shall identify a topic of current relevance in his/her branch of engineering, get approval of faculty concerned, collect sufficient literature on the topic, study it thoroughly, prepare own report and present in the class. Project preliminary: Identify suitable project relevant to the branch of study. Form project team (not exceeding four students). The students can do the project individually also. Identify a project supervisor. Present the project proposal before the assessment board (excluding the external expert) and get it approved by the board. The preliminary work to be completed: (1) Literature survey (2) Formulation of objectives (3) Formulation of hypothesis/design/methodology (4) Formulation of work plan (5) Seeking funds (6) Preparation of preliminary report Note: The same project should be continued in the eighth semester by the same project team.			
Expected outcome. The students will be able to <ol style="list-style-type: none"> Analyse a current topic of professional interest and present it before an audience Identify an engineering problem, analyse it and propose a work plan to solve it. 			
Evaluation Seminar : 50 marks (Distribution of marks for the seminar is as follows: i. Presentation : 40% ii. Ability to answer questions : 30% & iii. Report : 30%) Project preliminary : 50 marks (Progress evaluation by the supervisor : 40% and progress evaluation by the assessment board excluding external expert : 60%. Two progress evaluations, mid semester and end semester, are mandatory.) Note: All evaluations are mandatory for course completion and for awarding the final grade.			

COURSE CODE	COURSE NAME	L-T-P-C	YEAR OF INTRODUCTION
EC431	COMMUNICATION SYSTEMS LAB (OPTICAL & MICROWAVE)	0-0-3-1	2016
Prerequisite: EC403 Microwave & Radar Engineering, EC405 Optical Communication			
Course objectives:			
<ul style="list-style-type: none"> To provide practical experience in design, testing, and analysis of few electronic devices and circuits used for microwave and optical communication engineering. 			
List of Experiments			
Microwave Experiments: (Minimum Six experiments are mandatory)			
<ol style="list-style-type: none"> GUNN diode characteristics. Reflex Klystron Mode Characteristics. VSWR and Frequency measurement. Verify the relation between Guide wave length, free space wave length and cut off wave length for rectangular wave guide. Measurement of E-plane and H-plane characteristics. Directional Coupler Characteristics. Unknown load impedance measurement using smith chart and verification using transmission line equation. Measurement of dielectric constant for given solid dielectric cell. Antenna Pattern Measurement. Study of Vector Network Analyser 			
Optical Experiments: (Minimum Six Experiments are mandatory)			
<ol style="list-style-type: none"> Measurement of Numerical Aperture of a fiber, after preparing the fiber ends. Study of losses in Optical fiber Setting up of Fiber optic Digital link. Preparation of a Splice joint and measurement of the splice loss. Power vs Current (P-I) characteristics and measure slope efficiency of Laser Diode. Voltage vs Current (V-I) characteristics of Laser Diode. Power vs Current (P-I) characteristics and measure slope efficiency of LED. Voltage vs Current (V-I) characteristics of LED. Characteristics of Photodiode and measure the responsivity. Characteristics of Avalanche Photo Diode (APD) and measure the responsivity. Measurement of fiber characteristics, fiber damage and splice loss/connector loss by OTDR.
